ELECTRIC UNDERFLOOR HEATING ALUMINUM ROLL

In this system the pipe is replaced by a 3 mm thick cable, becoming an electrical system, which allows the comfort temperature to be reached in a very short time.

The cable is adhered on a mesh inside an aluminum roll, so that the thickness of the assembly is very reduced.

The roll is unfolded and placed directly on the floor so that it can be cut and rotated when it reaches walls and obstacles, allowing a faster and more comfortable installation.

It is especially suitable for small spaces where quickly obtaining a feeling of comfort is an important added value, such as bathrooms or hotel rooms.

ADVANTAGES OF ELECTRIC FLOOR:

- ✓ Quick and comfortable installation.
- ✓ Comfort temperature in a short time.
- ✓ Ideal for small spaces.
- ✓ Low profile system.
- ✓ Installation on foam and under flooring of Wood or carpet.

TECHNICAL FEATURES:

Reference	412.12540
Width	500mm
Long	2000mm
Strength	377.9 Ohms
Power per unit	160W
Strain	230V-AC
Frequency	50H
